Field 5: Summary statement

<p>An Estuary Research Programme has commenced, sponsored by MAFF, Environment Agency and English Nature, on predicting short and long term changes in estuarine shape and ecology. Six contrasting estuaries have been selected for special study: Blackwater, Humber, Mersey, Ribble, Southampton Water and Tamar.</p> <p>The Environment Agency, English Nature and the Centre for Coastal and Marine Sciences have received funding for a EU Life Nature project to develop a generic model on Coastal Habitat Management Plans and to lead the preparation of such plans for six pilot areas in eastern and south eastern England. Coastal Habitat Management Plans will act as an accounting system to record and predict losses and gains to the Habitats and Species of European or international importance within a Natura 2000 or Ramsar site subject to shoreline change and to set the direction for habitat conservation measures to address net losses. By doing this they will ensure that damage to or deterioration of Natura 2000 sites from either changes to the coast or from the coastal defence response to such changes is avoided or compensated for.</p>
